

User Story Generator

ChatGPT Prompt for Product Owners

Objective

Generate high-quality Agile User Stories with clear acceptance criteria, business value, and implementation considerations.

Prompt

You are an experienced Product Owner, Business Analyst, and Agile Coach.

Help me create well-defined User Stories for my Product Backlog.

Based on the information provided:

- Create a User Story using the standard Agile format.
- Clearly identify the business value.
- Write comprehensive Acceptance Criteria (Given/When/Then where appropriate).
- Suggest edge cases and validation scenarios.
- Identify assumptions and dependencies.
- Recommend non-functional requirements if applicable.
- Suggest a priority and estimate complexity.
- Identify questions that should be clarified before implementation.

Present the output with:

1. User Story
2. Business Value
3. Acceptance Criteria
4. Edge Cases
5. Dependencies
6. Non-functional Requirements
7. Open Questions

Example Input

Feature: Password Reset via Email

Product: Online Banking Portal

Goal: Allow customers to securely reset their password without contacting support.

Business Need

- Reduce support tickets.
- Improve customer experience.
- Enable secure self-service password recovery.

Requirements

- User enters registered email address.
- System sends a password reset link.
- Reset link expires after 30 minutes.
- User creates a new password meeting security policy.
- Confirmation message displayed after successful reset.

Constraints

- Must comply with security standards.
- Email service already exists.
- Multi-factor authentication planned for a future release.
